

CLAIMS

The "SENSIBALL" (laser football)

By David K. Smith

June 20, 2004

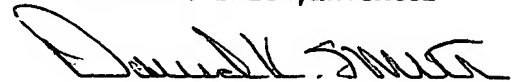

I David K. Smith claim that the "SENSIBALL" (laser football) will revolutionize the game of American football.

The "SENSIBALL" would use sensory devices to monitor the ball's progress on the playing surface by means of either GPS satellite tracking, or laser technology.

I further claim that this invention would assist referees in making critical judgement calls that could otherwise be made in error.

I also claim that the "SENSIBALL" would change the game of american, or Canadian football from a game of inches, to a game of one thousandths of an inch.

David K. Smith, Inventor
